

# Quick Start

Dear Guest!

We have made an effort to give you a rough overview of our territory by the map on the backside. The following gives a brief presentation about three of our flowing waters and three of our lakes as well as the respective proven fishing techniques. These waters are very near to the hotel and reachable by car within a 15 min. drive.

We hope these informations are of help to make the access in our territory much easier for you. Please also note that we offer a community fishing program which is free, as well as special guiding possibilities. Feel free to ask in the fishing shop or at the reception.

## Additional information "Krimmler Ache"

For one of our top waters, the Krimmler Ache, we have made a limitation of 10 fishermen per day to maintain its special charm. If you want to fish at the Krimmler Ache, please make a reservation in the fishing shop at least one day in advance. The Krimmler Ache is reachable only by taxi from the village Krimml. The taxi is going up twice a day at the morning and down twice a day at the evening. Also for the reservation of the taxi please speak to our guides in the fishing shop.

## 1 THE SALZACH

Width: 8-25 m, Depth 0,5-3 m partly Fly Only, partly Mixed Fishing waters

Is the main river of the valley. All the other Streams of the territory are running into it. The river has its spring on the upper end of the territory and due to its inflows it gets continuously bigger down the valley. Most parts of the Salzach are canalised even though more and more parts have been renaturated.

Renaturated parts are located by the village of Neukirchen, Bramberg (Habach, Steinach), Mühlbach, Hollersbach, Mittersill (Rettenbach), Uttendorf und Niedernsill. The Salzach is separated in Fly-Only Parts and Mixed-Water Parts (see map on the backside). The Salzach contains the biggest fish of the Territory.

**Types of fish:** Brown trout, rainbow trout, brook trout, greyling

**Techniques:** Mostly Nymphs and streamer. Dry fly fishing is only working at certain times of the year. Because of the mostly steep riverside it is recommended doing roll-casts or switch-casts. Although the renaturated areas are easy walking and offer enough space for casting.

**Nymph fishing:** The most important thing is to fish the bottom of the river. Heavy tungsten nymphs or a dropper with an additional splitshot in combination with a strike indicator is recommended. We suggest using rods with line weight #7 and floating WF lines. The tippet should not come under 0,22mm!

**Streamer fishing:** Streamer are fished at a size from 5cm. We recommend rods with line weight #8 and appropriate sink-tips or sinking lines.

**GPS coordinates:** Start: 47.243561, 12.231104 | Ende: 47.284208, 12.676111

## 2 THE FELBERBACH

Width: 6-8 m, Depth: ca.0,5 m Fly Only

It is a fast flowing alpine brook running out the Felberbach Valley which flows into the Salzach at the town of Mittersill. The width of this brook is about 6 to 8 metres. Smaller pools are common over the total length.

**Types of fish:** Brown trout, brook trout

**Techniques:** Mostly dry fly fishing. It is recommend presenting big and good floating dry flies behind rocks where the current turns back or at the edge areas. But also try the faster sections at the middle. Nymphs are also successful. Notice, that the casting distance is very short, therefore a shorter leader than usually is recommended.

**Dry fly fishing:** Colour and model of the flies are secondary. It is important, that the flies are good floating and easy to spot. The leader plus tippet should not be longer than 6 to 8ft. The tippet should not come under 0,16mm because of the strong current. We recommend rods with line weight #4-5 and 8 '6" long.

**Nymph fishing:** Nymphs can be fished with a strike indicator or as an extension to a big and good floating dry fly. In this way, the dry fly works as a strike indicator, but you can also get bites on it. (New Zealand style)

**GPS coordinates:** Start: 47.193319, 12.475821 | Ende: 47.282849, 12.490088

## 3 THE STUBACH

Width: 8-10 m, Depth 0,5-1,5 m Fly Only

It is a 6 to 10 metres wide brook with very little slope. Calm and faster sections changes harmoniously. Notice, that sometimes, mostly during the week, the Stubach brings more water, due to a hydropower station located at the end of the valley. The Stubach is easy to wade in and easy to fish. Notice the territorial boundary (see map).

**Types of fish:** Brown trout, rainbow trout, brook trout, grayling and chub.

**Techniques:** It's not really easy to fish from the riverside, because of the strong vegetation. But as said the Stubach is easy to wade in, so no worries. Especially the part where the Stubach is running into the Salzach gives possibility to catch bigger fish. In the Stubach any technique brings success, whether it's fishing the dry fly, wet fly, nymph or streamer.

**GPS coordinates:** Start: 47.268689, 12.567510 | Ende: 47.268689, 12.567510

## 4 THE HINTERSEE

Area: 5 ha, up to ca. 10 m deep Fly Only

This natural originated lake is situated 1400 metres above sea level and has a water surface of 5ha. Surrounded by fantastic landscape, the Hintersee offers a top class of dry fly fishing.

**Types of fish:** Brown trout, grayling, brook trout, lake trout and alpine char.

**Techniques:** The Hintersee offers enough space to cast. The lakeside is easy to walk apart a few muddy parts. Rising fish can be observed almost always, therefore as mentioned it is perfect for dry fly fishing. But also nymphs and streamer brings success. It is not allowed to use a belly-boat.

**Dry fly fishing:** It is recommended to use a longer leader than usual with a thin tippet from 0,12 - 0,14mm. We suggest using small natural flies. A lot of fishermen make the mistake of doing too many casts. The fish is constantly moving and searching for food, so let the fish find the fly.

**GPS coordinates:** 47.1944515, 12.4763132

## 5 THE STAUSEE HOLLERSBACH

Area: 3,5 ha, up to ca. 6 m deep, partly Fly Only, partly Mixed Fishing waters

This reservoir is located in the Hollersbach Valley 900 metres above sea level and has a water surface of 3,5ha. It is separated into mixed water at the lower part and fly only at the dam area and the upper part, where the brook coming in. (see map)

**Types of fish:** Brown trout, rainbow trout and brook trout.

**Techniques:** Any common fishing techniques are successful at this reservoir. The upper, fly only section is easy to walk and offers enough space for casting. Rods with line weight #6 work pretty well.

**GPS coordinates:** 47.2699411, 12.4196527

## 6 THE ELISABETH SEE

Area: ca. 0,8 ha, Depth: up to 3,5 m Mixed Fishing waters

It is a small lake situated in the Amertal valley at 1400 metres above sea level. The water is very clear therefore you can have a look all the way down to the bottom and see where the fish is located. One lakeside is very easy to walk and offers enough space for casting.

**Types of fish:** brown trout, rainbow trout and brook trout.

**Techniques:** The Elisabethsee offers very good possibilities for dry fly fishing. But also nymphs and streamer brings success. Especially bright coloured chartreuse nymphs work very well.

**GPS coordinates:** 47.1798027, 12.5286255

Dry Fly
